

Comparing Symptoms: Cocci & COVID-19

These Diseases Share Many Common Symptoms: Ask Your Doctor If You Should Be Tested

- » COVID-19 & Cocci cannot be self-diagnosed.
- » Cocci (Valley Fever, Coccidioidomycosis) is a fungal infection & cannot be spread from person-to-person.
- » If you have a fever, cough, or other symptoms, isolate yourself from others & contact your healthcare provider.

- » Be sure to call 911 if you are having any shortness of breath, difficulty breathing, or you feel you have a life-threatening emergency.
- » It is important to prevent the spread of COVID-19 between yourself & others by following CDC guidelines & recommendations including washing your hands.
